

## NEW Revolutionary Sponges Are Here

### Leaving our Footprint on Radiology Sponges

One of the things that we like to do here at Techno-Aide is evaluate certain radiology accessories and see if there might be a way to improve upon them. When we looked at positioning sponges used in radiology, we noticed a whole slew of problems presented by old fashioned sponges. First, they leave behind artifacts which simply isn't acceptable. Secondly, they just weren't providing adequate support for the body part being imaged. It kind of makes you wonder what these outdated sponges ARE good for. So, we sought a way to design sponges that still held all the functionality of a standard sponge without the nagging artifacts and support problems.

**Reimagining the Sponge:** Our new radiolucent sponges are the result of both experimentation and thinking outside the box. We wanted a sponge that provided superior stability and left behind no lines. In addition to looking at the materials that make up a sponge, we also had to consider the size and, in particular, the dimensions of the sponge. We ensured stability by creating a larger footprint, which means the base itself is wider and therefore more sturdy. Then we redesigned the rest of the radiolucent sponge to fit the contours of the body in a more comfortable and stable manner. And voila! Stealth-Cote and Stealth-Core sponges were born.

**Endless Benefits of Our New Sponges:** While we've discussed some of the more obvious benefits of these sponges above, there are many other perks to having these radiology sponges on hand. Another major advantage is the fact that these sponges are easy to clean. Our sponges have a special coating that makes cleaning quick and easy. Not to mention the fact that they're antifungal, antibacterial, non-allergenic, meet the California TB requirements for flammability, self-deodorizing and stain resistant. These revolutionary sponges really are the best of all worlds!

**Saving Costs and Passing Them on to You:** You might be tempted to think that sponges with all of these benefits would be expensive, right? Well, that brings us to our final (but just as exciting) benefit. Redesigning the sponge in a way that actually uses less material, we have the advantage of being able to pass our savings on to you in the form of an affordable sponge.

Being ahead of the curve is something we are proud of here at Techno-Aide. We consider it our privilege to make the lives of technologists easier and - through the development of these amazing new sponges - we feel that we've done just that. Come browse our inventory of sponges, sandbags and our various other radiology positioning aids today.
