Picking the Perfect Positioning Aid

Techno-Aide is here to help you the perfect positioning aid! Our sponges are specially designed to meet any need! Below will be everything you need to know about our sponge options and how to choose the perfect fit.

STEP 1: WHAT TYPE OF SPONGE DO YOU NEED?

Uncoated Foam

Basic (core), open-cell foam. Non-coated, non-cleanable surface. The least durable and least expensive foam.

Coated Foam

Fluid-resistant, cleanable coating over standard (core) foam core. Minimal shadowing with low attenuation. Light green.

Closed Cell Foam

Our most popular foam! Artifact free, cleanable surface, lightweight and durable. Our top option! Charcoal grey.

Vinyl Covered Foam

Firm foam with a heavy-duty vinyl covering. Ideal for extreme patient comfort and durability. Blue vinyl.

Go to steps 2 & 3!

Skip to step 4!

STEP 2: FOAM TYPES

Standard Foam

Standard open-cell foam for general positioning. Light and comfortable option for basic imaging.

Firm/Bariatric Foam

A higher density open-cell foam than standard foam. Typically used to support larger/heavier/bariatric patients for positioning.

STEP 3: ARTIFACTS?

Non-Flared Sides

Non-flared sponges may show artifacts under imaging, specifically when coating is applied.

Flared Sides

Stealth™ sponges are designed with proprietary angles to offer **artifact-free** viewing. Flared sides will increase size!

STEP 4: PICK A SHAPE AND SIZE!

Different imaging procedures require different designs. Techno-Aide is proud to offer the largest selection of standard and specialty sponges available. We offer hundreds of sponges designed for spinal, epidural, cardiac, echocardiography, extremity, cervical, AP/PA, decubitus, ultrasound, phlebotomy, CT, podiatry and many more! Starting on page 3, shop the rest of this catalog for our most popular options or submit for a custom quote today!

NEW Closed Cell Positioning Sponges

Closed cell foam is the future of radiology. This cleanable, non-porous foam is completely radiolucent. The charcoal grey, low density foam is extremely durable and comfortable for patients. Closed cell sponges offer 100% artifact free imaging.

NEW Orthopedic Leg Length Discrepancy Block Kit

Convenient and practical method for the assessing and testing of patients with leg length discrepancy. Nine closed cell foam blocks are graded by half centimeters (1cm to 5cm). The block is placed under the foot of the shorter leg, to achieve proper position of the pelvis for leg, spine, and pelvis x-rays in the standing position. The image is best performed with blocks under the short limb to level the pelvis, to avoid unwanted adjustments by the patient to their hips, knees or ankles.

Decubitus Block with Image Receptor Plate/Cassette Holder

Aides the technologist in positioning patients for cross-table lateral examinations. The decubitus pad ensures that the patient is elevated into a position above the plane of the imaging receptor for adequate imaging of the targeted body part. Provides excellent support and spine correction for laterals and decubitus views. Coated, firm foam.

- Shape:** Rectangle Wedge Cylinder Other _____

- Mark Sides:** A side - Primary surface
 For internal use only B side - Secondary surface
 C side - Un-used surface

- Sponge Type:** Standard (Comfort) Foam Vinyl Covering
 Firm (Bariatric) Foam Requires Firm Foam
 Blue vinyl covering (sewn)

- Closed Cell Foam
 2lb standard
 6lb weight bearing

- Coating:** Non-Coated (Core Foam) Coated
 Does not apply to closed cell or vinyl. Basic (core), open-cell foam. Non-cleanable, less durable, porous surface. Fluid-resistant, cleanable coating applied over core foam. Light green in color.

- Size/Style:** Apply flared "Stealth" sides Use exact measurements
 Does not apply to closed cell or vinyl. Proprietary angles applied to original size offers artifact-free viewing during normal use. Will increase overall size. Non-flared sides will show artifacts under imaging. Specifically when coating is applied to any sponge.

- Closed Cell Foam does not require coating to be radiolucent and artifact free.
- Closed Cell Foam does not require "stealth" style (flared sides) to be artifact free.
- Closed Cell Foam can be cleaned with standard (typical) cleaning & disinfectants.
- Coating will cause sponges to show under imaging UNLESS sides are flared.
- Sponges may show artifacts when not used properly for designed application.
- Vinyl bolster seams will show under imaging.

X-Ray Marker Reference

“Each radiograph must include an appropriate marker that clearly identifies the patient’s right (R) or Left (L) side. Medico-legal requirements mandate that these markers be present. R and L markers must be used with CR and DR digital imaging. The development of digital imaging and the use of CR and DR have enabled an environment in which the R and L markers can be placed on the image electronically. This is not recommended because of the great potential for error and legal implications. Anatomic markers should be placed on the CR cassette or DR table similar to screen-film cassettes.”

Image Scaling Marker Device

Scaling a digital image is mandatory in order to assure the highest level of diagnostic accuracy. It is critical to know the difference between the size of the anatomy shown on a digital monitor as compared to the actual anatomy. An easy to use, easy to clean, easy to understand calibration tool is a must, and a Rollr Precision Marker is the answer!

The patent pending radiolucent sphere holder and a size indicator sphere come together to allow perfect visibility of the sphere on the image as taken from any direction. A millimeter marker on the sphere holder indicates the size of the sphere that is being used.

The suction cup base allows the unit to be firmly secured to a flat table or a vertical wall bucky board that is close to the patient. The small footprint of the suction cup does not interfere with the patient, the technologist, nor limit its use.

The flexible gooseneck arm is perfect for positioning the calibration sphere as close as possible to the critical anatomy. The arm is covered with a smooth, crevice-free surface that allows for easy sanitation.

The autoclavable unit comes with the suction stand and one calibration sphere. Additional spheres can be bought separately in packs of six (6).

Techno-Aide Best Fit Sizing Guide

Techno-Aide Sizing Charts are based on universal body sizes. But let's face it... nobody is average! A great apron won't fit like a pair of jeans or a suit. **Aprons are meant to fit multiple body types and sizes!** So, in order to get the "Best Fit for You," please consider the following when measuring yourself for a standard garment:

PROTECTION IS PRIMARY: Why are you wearing an apron? Protection from radiation! At Techno-Aide, we understand that comfort is important, but never as important as protection. Our aprons are designed to keep the user safe above all else. But who says you can't add a little style and comfort along the way?

CIRCUMFERENCE CONSIDERATIONS: When measuring for a Front Protection Apron, measure from one side of the widest part of your body, around to the other side - the actual distance you want protected. Then, tell us if that measurement is your chest, tummy, or hips.

HEIGHT CONSIDERATIONS: In relation to your circumference, do you have a long or short torso? We want to make sure that you are adequately protected!

Notes About Measuring!

Sizes shown for apparel (other than front protection) are **ACTUAL** body measurements.

All lengths are from the **sternal notch or waist** downward, depending on the garment.

One Size to Fit Them All!

Don't get hung up with complicated customization!

Standard sizes are designed to fit nearly every body type. **As shown to the right**, our standard Large Flex-Guard can be worn properly by three people with completely different body types!

Use our expert guides to find the perfect size today!

*Each person is wearing a standard (non-custom) large Flex-Guard apron appropriately. Photos provided to show standard sizing fit. Apron shown in default 61-Sapphire material.
