Techno-Aide Best Fit Sizing Guide

Techno-Aide Sizing Charts are based on universal body sizes. But let's face it... nobody is average! A great apron won't fit like a pair of jeans or a suit. **Aprons are meant to fit multiple body types and sizes!** So, in order to get the "Best Fit for You," please consider the following when measuring yourself for a standard garment:

PROTECTION IS PRIMARY: Why are you wearing an apron? Protection from radiation! At Techno-Aide, very more concerned about your health and safety. Comfort is important, and while our garments are comfortable, comfort will always take a back seat to protection. Isn't that why you're purchasing Protective Apparel?

CIRCUMFERENCE CONSIDERATIONS: When measuring for a Front Protection Apron, measure from one side of the widest part of your body, around to the other side - the actual distance you want protected. Then, tell us if that measurement is your chest, tummy, or hips.

HEIGHT CONSIDERATIONS: In relation to your circumference, do you have a long or short torso? We want to make sure that you are adequately protected!

Front Protection Apron

Notes About Measuring!

Sizes shown for apparel (other than front protection) are **ACTUAL** body measurements.

All lengths are from the **sternal notch or waist** downward, depending on the garment.

One Size to Fit Them All!

Don't get hung up with complicated customization!

Standard sizes are designed to fit nearly every body type. **As shown to the right**, our standard Large Flex-Guard can be worn properly by three people with completely different body types!

Use our expert guides to find the perfect size today!

*Each person is wearing a standard (non-custom) large Flex-Guard apron appropriately. Photos provided to show standard sizing fit. Apron shown in default 61-Sapphire material.

Picking the Perfect Positioning Aid

Techno-Aide is here to help you the perfect positioning aid! Our sponges are specially designed to meet any need! Below will be everything you need to know about our sponge options and how to choose the perfect fit.

STEP 1: WHAT TYPE OF SPONGE DO YOU NEED?

Uncoated Foam

Basic (core), open-cell foam. Non-coated, non-cleanable surface. The least durable and least expensive foam.

Coated Foam

Fluid-resistant, cleanable coating over standard (core) foam core. Minimal shadowing with low attenuation. Light green.

Closed Cell Foam

Our most popular foam! Artifact free, cleanable surface, lightweight and durable. Our top option! Charcoal grey.

Vinyl Covered Foam

Firm foam with a heavy-duty vinyl covering. Ideal for extreme patient comfort and durability. Blue vinyl.

Go to steps 2 & 3!

Skip to step 4!

STEP 2: FOAM TYPES

Standard Foam

Standard open-cell foam for general positioning. Light and comfortable option for basic imaging.

Firm/Bariatric Foam

A higher density open-cell foam than standard foam. Typically used to support larger/heavier/bariatric patients for positioning.

STEP 3: ARTIFACTS?

Non-Flared Sides

Non-flared sponges may show artifacts under imaging, specifically when coating is applied.

Flared Sides

Stealth™ sponges are designed with proprietary angles to offer **artifact-free** viewing. Flared sides will increase size!

STEP 4: PICK A SHAPE AND SIZE!

Different imaging procedures require different designs. Techno-Aide is proud to offer the largest selection of standard and specialty sponges available. We offer hundreds of sponges designed for spinal, epidural, cardiac, echocardiography, extremity, cervical, AP/PA, decubitus, ultrasound, phlebotomy, CT, podiatry and many more! Starting on page 22, shop our most popular options or submit for a custom quote today!

NEW Closed Cell Positioning Sponges

Closed cell foam is the future of radiology. This cleanable, non-porous foam is completely radiolucent. The charcoal grey, low density foam is extremely durable and comfortable for patients. Closed cell sponges offer 100% artifact free imaging.

X-Ray Marker Reference

“Each radiograph must include an appropriate marker that clearly identifies the patient’s right (R) or Left (L) side. Medico-legal requirements mandate that these markers be present. R and L markers must be used with CR and DR digital imaging. The development of digital imaging and the use of CR and DR have enabled an environment in which the R and L markers can be placed on the image electronically. This is not recommended because of the great potential for error and legal implications. Anatomic markers should be placed on the CR cassette or DR table similar to screen-film cassettes.”
