

Sponges & Bolsters

2019
PRODUCT
GUIDE

CHECK OUT WHAT'S NEW FOR 2019

2019 will be another year of innovation for Techno-Aide. Providing a safer working environment is our top priority. You will see an assortment of new products and some incredible upgrades to our existing line designed to make your job easier and safer. This year Techno-Aide once again leads the way in innovation and protection by introducing our new infection-resistant vinyl bolsters.

With hundreds of options available today, Techno-Aide makes the choice easy and affordable without sacrificing patient's health. This new bolster line protects against the growing threat of infections like MRSA and aggressive antibiotic-resistant bacteria. These "super bugs" are one of the largest threats the healthcare industry faces today. Techno-Aide is here to protect technologists' and patients!

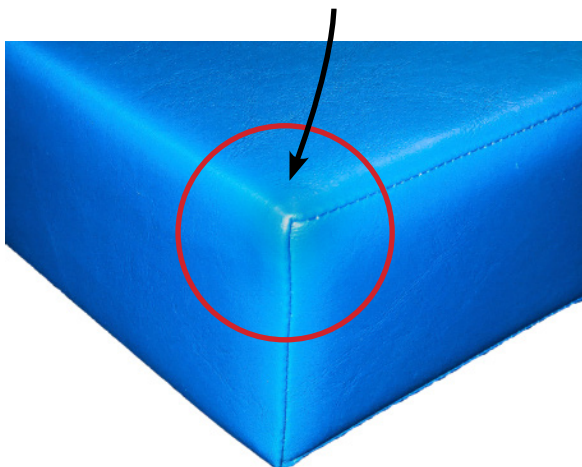

Utilizing a heavy medical-grade, anti-microbial blue vinyl fabric is sewn and welded at all seams to preserve the core material. Completely sealed and secure, these vinyl bolsters inhibit the growth of any harmful bacteria inside and out. Without sacrificing convenience, our one of a kind bolsters can be cleaned with any standard approved hospital disinfectant. Compared to other unsealed and unsanitary "hook and loop" closures, these bolsters are the clear and easy choice for the future.

This catalog will showcase our most popular sizes and shapes. Don't forget, Techno-Aide is happy to offer custom ordering for any shape or size you can imagine. You need it, we can make it!

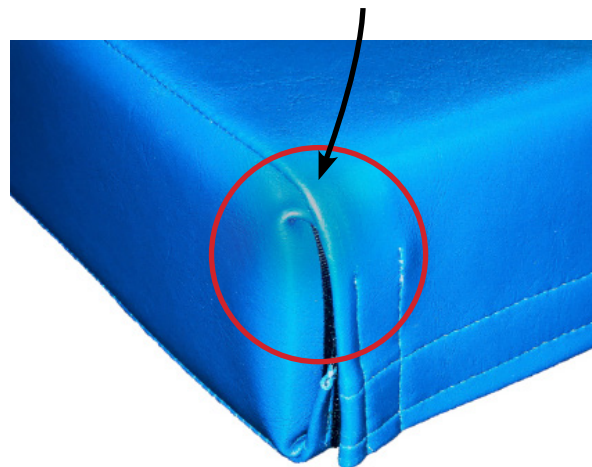

NEW Sealed Vinyl Bolsters Feature

- A Firm high density urethane foam core for maximum support
- Waterproof outer coating for superior infection control
- Easy to clean surface for infection control
- Increased durability and tensile strength
- Radiolucent (seams will show)
- Safe for multi-patient use
- Non-removeable cover

Completely sealed seams for full protection and sanitation!

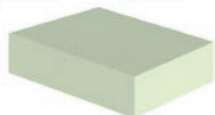

Unsealed seams. Unsanitary and decreased protection.

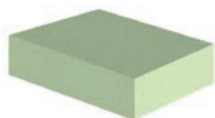

Types of Positioning Sponge Foam

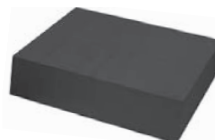

Techno-Aide manufactures and provides THREE different types of sponge foam that meet a wide range of needs to ensure proper patient positioning, imaging efficiency, and accuracy. All sponges are radiolucent and fire-retardant.

Standard Foam (STD): standard open-cell foam for general positioning. Color: light green.

Firm/Bariatric Foam (FRM): a higher density open-cell foam than standard foam, and is used to support larger/heavier patients for positioning. Color: light green.

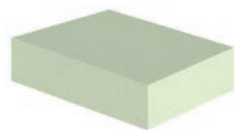

Closed Cell Foam (CLSD): extra firm closed-cell foam resists fluid absorption. Typically used as weight-bearing.

COMPARE TO CFI

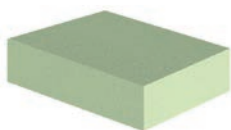

Techno-Aide offers compatible options for most sponges and pads formerly offered by CFI.

Positioning Sponges are Available in these Finishes:

Non-Coated Standard

Basic, open-cell positioning sponge shown above (STD).

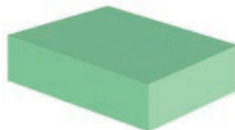

Non-Coated Firm/Bariatric

Firm, open-cell positioning sponge shown above (FRM).

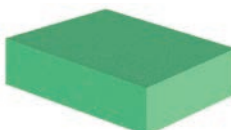

Non-Coated Closed-Cell

Closed-cell positioning sponge (CLSD) shown above.

Coated Standard

Standard foam (STD) with cleanable, fluid-resistant coating. Minimal shadowing with low attenuation. Light green.

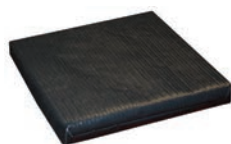

Coated Firm/Bariatric

Firm foam (FRM) with cleanable, fluid-resistant coating. Minimal shadowing with low attenuation. Light green.

Covered Vinyl

Firm support foam (FRM) sewn into a covering of durable royal blue upholstery vinyl.

Covered Heavy Duty Vinyl

Firm support foam (FRM) sewn into a covering of nylon reinforced heavy vinyl. Blue or black. (Not shown in catalog.)

Stealth Rectangle Positioning Sponges

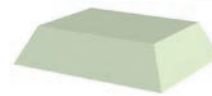

Revolutionary design minimizes ghosting and line artifacts. Stealth positioning sponges are available coated and non-coated. May be larger than traditional style. Dimensions listed as "Width x Length x Height."

STEALTH NON-COATED

Stealth-Core™ sponges have been designed with unique angles to offer artifact-free viewing and increased stability.

STEALTH COATED

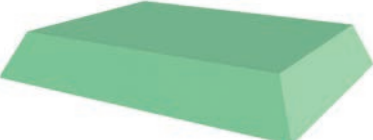

Stealth-Cote™ sponges include a proprietary coating to add cleanability and durability to every sponge and includes antimicrobial protection.

Proprietary, antimicrobial protective coating

Decubitus Block with Image Receptor Plate/Cassette Holder

Aides the technologists in positioning patients for cross-table lateral examinations. The decubitus pad ensures that the patient is elevated into a position above the plane of the imaging receptor for adequate imaging of the targeted body part. Provides excellent support and spine correction for laterals and decubitus views. Coated, firm foam.

NEW Closed Cell Positioning Kit

FIRM, HIGH DENSITY, NON-POROUS FOAM! This Closed Cell Positioning Kit is features the most popular shapes and sizes for all applications. Manufactured with a **non-porous foam that is completely radiolucent**. These sponges are **easy to clean and will not stain or absorb fluids, even when torn!** These sponges are more firm than standard foam, providing excellent positioning for patients or allowing focus on a particular area of the body.

Color: Charcoal Gray. Ships @ 5lbs. (box dimensions - 28" x 15" x 11")

Vinyl-Covered Positioner Kits

Reusable bolsters are manufactured from firm, high-density urethane foam. Royal Blue outer covering is durable, heavy gauge, reinforced vinyl. Seams are sewn and tear resistant. Easy to clean. Bolsters are **RADIOLUCENT**, however, the seams may show. Provides excellent support for a wide variety of imaging needs.

LATERAL DECUBITUS POSITIONER KIT

This KIT includes a 90° support with hook and loop stability straps and a YVFK decubitus bolster to aid in cross lateral examinations. The pad assures the patient is elevated into the imaging field.

Pad: 20" x 13" x 3"
#TBC-2214

DEXA POSITIONING KIT

The large bolster aids in positioning the AP lumbar spine. The small head bolster and 15° "A" frame splint lock the feet into position to abduct both legs to hold full extension at the knees and hips.

#TI-SET

KIT includes:

- (1) "A" Frame Foot Splint
- (1) YVFJ Head Bolster (8" x 12" x 3")
- (1) YVFQ Leg Bolster (20" x 20" x 12")
