HAZARDOUS DECOMPOSITION PRODUCTS: Oxides of carbon and nitrogen, free isocyanate, acetaldehyde, acrylonitrile, polymer fragments, and hydrogen cyanide. Fire retardant foams may generate emissions of hydrogen chloride, hydrogen bromide or phosphoric acid depending on the fire retardant additive.

SECTION 11: TOXICOLOGICAL INFORMATION

ACUTE TOXICITY: No data available

ROUTES OF EXPOSURE: Inhalation, eye contact

HEALTH HAZARDS: **Inhalation:** Foam dust – Coarse dust can cause mechanical irritation of the upper respiratory tract when concentrations are above the applicable occupational exposure limit. Airborne dust is evaluated as a nuisance dust. Vapors – Irritating vapors (decomposition products) may be produced if product is exposed to temperatures above 350 F. If ignited, foam may decompose and emit toxic gases and respiratory irritants. **Eye:** Foam dust – Coarse dust can cause mechanical irritation to the eyes. If exposed, avoid rubbing eyes. Vapors – Irritating vapors (decomposition products) may be produced if product is exposed to temperatures above 350 F.

SECTION 16: OTHER INFORMATION

1.DO NOT EXPOSE POLYURETHANE FOAM TO OPEN FLAMES OR OTHER DIRECT OR INDIRECT HIGH TEMPERATURE IGNITION SOURCES.

Polyurethane foam and hydrocarbon gel will burn if exposed to a sufficient heat source. The ignition temperature of the material will vary depending on the product chemical formulation, but all polyurethane foams and hydrocarbon gels are combustible and represent a fire risk. Once ignited, these materials may degrade and melt to form a combustible liquid, which may add to the fire involvement.

2.TERMS SUCH AS"FIRE RETARDANT", "SLOW BURNING", "FLAME RESISTANT" AND "UNDERWRITER'S LABORATORY RATED" DESCRIBE CERTAIN FLAMMABILITY PROPERTIES AND MUST NOT BE REGARDED AS DENOTING FIRE SAFETY UNDER ALL CONDITIONS.

Additionally, small-scale fire tests are not intended to reflect hazards presented by these or any other material under real fire conditions.

3.SMOKE FROM BURNING FOAM IS IRRITATING TO THE EYES AND RESPIRATORY TRACT. SMOKE INHALED FROM BURNING OR SMOLDERING PRODUCT MAY BE TOXIC.

Thermal decomposition products from polyurethane foams and hydrocarbon gels can be toxic and present a risk to humans who are exposed. This is true for all organic materials. Fire risks in varying degrees are common to all fires: heat, carbon monoxide, other toxicants, oxygen depletion and smoke. In fires with these materials, great heat, and large quantities of dense smoke and potentially toxic gases can be generated quickly.

4.STANDARD FIRE-FIGHTING EQUIPMENT GENERALLY EMPLOYED BY AUTHORIZED FIREMEN IS MANDATORY.

Personnel involved in fire fighting should wear self-contained breathing apparatus and be aware of the exposure to toxic and potentially lethal smoke and gases.
